

Internship Report

Junior Software Developer Internship at YuvaIntern

Student

Anvesha Dwivedi

Roll Number

2410030606

Section

3CSE17

Semester

5 | Batch 2026-27

*School of Computer Science and Engineering, IILM University, Greater
Noida, U.P.*

INTRODUCTION

About the Internship

This report presents an account of the internship undertaken by **Anvesha Dwivedi** (Roll No. 2410030606, Section 3CSE17, Semester 5) as a **Junior Software Developer Intern at YuvaIntern**, carried out in partial fulfilment of the requirement of the degree of Bachelor of Technology in Computer Science and Engineering at IILM University, Greater Noida.

The internship was conducted in **remote mode over six weeks** — from **September 07, 2026 to October 19, 2026** — providing practical, hands-on exposure to real-world software development practices and helping bridge the gap between academic learning and industry requirements.

The program involved tasks related to coding, testing, and debugging of software applications, under the mentorship and guidance of the development team at YuvaIntern.

About YuvaIntern

YuvaIntern is an internship and skill-development platform that connects students and early-career professionals with structured, industry-relevant internship programs. Operating in association with the **National Skill Development Corporation (NSDC)**, YuvaIntern focuses on providing learners with practical exposure across domains such as software development, data analytics, digital marketing, and business operations.

Mentorship

Guided by industry professionals

Hands-On Work

Real project tasks and deliverables

Skill Certification

Recognized completion credentials

Industry Readiness

Bridging academia and workplace

PROBLEM STATEMENT

The Challenge

Software development teams in growing organizations often face the challenge of **maintaining and enhancing existing applications** while ensuring that new features are developed, tested, and deployed reliably and on schedule.

There is a continuous need for junior developers who can assist in:

- Writing clean, maintainable code
- Identifying and resolving bugs efficiently
- Validating application functionality through systematic testing
- Upholding overall product quality as the codebase evolves

What This Internship Set Out to Achieve

1 Software Development Lifecycle Exposure

Gain practical exposure to the complete SDLC in a professional environment.

2 Application Development Support

Assist the development team in creating and maintaining software applications.

3 Coding, Testing & Debugging Proficiency

Develop hands-on skills in writing, validating, and fixing software solutions.

4 Industry Tools & Workflows

Understand industry-standard tools, workflows, and coding practices.

5 Problem-Solving & Analytical Skills

Strengthen analytical thinking through real project tasks and challenges.

SCOPE OF THE PROJECT

What the Work Covered

The scope of the internship encompassed assisting in the **design, development, and maintenance of software modules** assigned by the development team. This included:

Code Writing & Review

Writing and reviewing code to meet functional requirements.

Unit-Level Testing

Performing systematic tests to verify correctness of modules.

Defect Identification & Fixing

Identifying bugs and resolving them to maintain quality standards.

Documentation

Recording changes made with periodic mentor feedback and review.

The Tech Stack

Programming Languages

Python / JavaScript

Front-End Technologies

HTML, CSS, JavaScript

Version Control

Git and GitHub

Development Environment

Visual Studio Code

Testing & Debugging

Browser Dev Tools, in-built language debuggers

Collaboration Tools

Email and virtual meeting platforms for remote mentorship

SYSTEM ARCHITECTURE

How the System Was Structured

The software modules developed and maintained during the internship followed a **modular, layered architecture** typical of modern web-based applications. This separation of concerns ensured that individual components could be developed, tested, and debugged independently.

METHODOLOGY

Development Methodology

Thank You

This internship at **YuvaIntern** provided invaluable real-world exposure to the software development lifecycle, strengthening both technical proficiency and professional readiness.

Expected Outcomes

- Practical experience in coding, testing, and debugging real software applications
- Improved proficiency in industry-relevant programming tools and practices
- Enhanced ability to work independently in a remote, professional environment
- A working understanding of the SDLC followed in the industry
- Successful completion evidenced by the Certificate of Experience issued by YuvaIntern
